EARLEY TOWN COUNCIL

Interim Earley Green Infrastructure Action Plan

April 2022

Context and Purpose

Green Infrastructure (GI) is vital to our planet and to the quality of life for existing and future generations. GI includes all soil, vegetation and water – this would also include animals and fungi. It does not include paved or sealed surfaces or buildings, but it does include features on buildings such as green roofs and green walls. GI can be accessible or inaccessible, publicly or privately owned, managed or unmanaged, designated as open space, for nature conservation, or not.

Many of the actions in the Earley Climate Emergency Action Plan will help to promote and protect Earley's GI. However, Earley Town Council (ETC) recognises that there are many measures not specifically related to addressing the Climate Emergency, such as protecting and creating new wildlife corridors, and use of private gardens to improve amenity biodiversity and manage surface water, that are also hugely beneficial to the environment and human physical and mental well-being.

Earley residents have told ETC that they want the environment to be at the heart of life in Earley. Recognising the importance of GI, ETC seeks to coproduce and implement with Earley residents and local groups, an Earley Green Infrastructure Action Plan (EGIAP) to work in harmony with the Earley Climate Emergency Action Plan.

The Aim of the Earley Green Infrastructure Action Plan is to set out a realistic and sustainable strategy to enable ETC to help Earley's GI to become bigger, better and more joined together.

This 3rd draft incorporates much input from residents who attended a participatory workshop on the 28th September 2021 to co-produce the EGIAP as well as the Earley Town Council Climate Emergency Working Group and the Rangers.

The EGIAP will be a publicly available live document with ongoing refinement and monitoring by local residents and groups. An annual review by ETC's Policy and Resources Committee, including performance and progress made during the previous 12 months, will be posted each year on ETC's website. It should be noted that this is a live document and adaptable to new initiative.

Earley Green Infrastructure Action Plan

Key Objectives	Steps and Actions	Funding	Performance indicators	RAG rating
Provide a high quality, nature rich green infrastructure	Obtain maps of Earley's existing green spaces, highlighting green corridors. A Green Corridor Map being prepared by			lating
	the Earley Environmental Group will be the hub of all Green Infrastructure policies			
	Investigate options for increasing the tree canopy in Earley. This must be done carefully so as not to be at the expense of biodiversity rich grass land.			
	Identify opportunities for 'tiny forests', typically undevelopable sites into thriving microcosms of nature. See for instance: <u>Urban-Forests-report-The-Miyawaki-</u>			
	<u>method—Data-concepts.pdf.</u> Care will be needed to ensure that this doesn't just produce dense scrub.			
	Work with organisations such as the Veteran Tree Association and Earley Environmental Group to maintain a comprehensive database of all trees of			
	significance in Earley seeking, where appropriate, for each to be protected with a Tree Protection Order. It is essential that this should be a rapid and large			
	increase in TPOs.			

Identify and support opportunities for		
increasing biodiversity, such as extending		
hedgerows at Sol Joel Park and at May's		
Lane Cemetery. These must be of		
sufficient width, height, density and		
complexity to be useful to wildlife		
,		
Produce and make available on the ETC		
website, management plans for all green		
spaces owned or controlled by ETC.		
Whenever GI is proposed, prepare a		
budget and maintenance plan which		
identifies the purpose, responsibilities,		
upkeep and contingency for unforeseen		
measures.		
Explore local opportunities for		
disseminating information about trees and		
plants able to cope with likelihood of		
future lower rainfall. The ETC and EEG		
websites should be utilised to disseminate		
the limited information on dryer summers.		
For a standard the set is a set of the		
Except where there is a specific		
requirement for a particular type of lawn		
for amenity or recreational purposes,		
where practical, lawns on ETC-owned land		
should be planted with a range of low-		
growing wildflowers to attract pollinating insects. This will have to be done		
gradually.		
Prepare and implement a strategy that		
enables land along the edges of mown		
ETC-owned or controlled land to be		

managed in ways that will attract		
pollinators and add to biodiversity.		
Accept as Policy that ETC will strive to		
remove invasive species from the whole of		
Earley and in particular, the Maiden Erlegh		
Lake and assist where practicable with this		
in nearby waterways to increase the		
ecological quality of wetland habitat.		
Review annually and publish on the ETC		
website the ETC Tree Strategy.		
website the LTC free Strategy.		
Explore opportunities for creating rain		
gardens on ETC - owned land, and signpost		
residents to information that they might		
consider adopting in their own properties.		
consider ddopting in their own properties.		
Accept as Policy that ETC will explore		
possibilities for adding swales and use of		
woody debris within the Maiden Erlegh		
Nature Reserve to hold back surface water		
flow in ways that could also create new		
and even more bio-diverse existing		
habitats.		
Tree felling is sometimes the right thing to		
do. Felled wood in areas other than the		
Reserve should be moved where practical,		
to the Reserve to make more deadwood		
habitats. ETC's Strategy must address		
what will happen to embodied carbon in		
any trees on ETC land after felling or any		
form of surgery. ETC will also explore		
opportunities for providing more		
community wood chip bins within Earley		
to make their management easier.		

		1
	Review ETC's pesticide usage and agree a zero target to reduce pesticide as soon as possible. Encourage allotment holders at Culver Lane to include some flowers for pollinating insects and to avoid use of chemicals that harm wildlife. Also, to encourage organic growing. Encourage all residents to make provision of bug hotels, bird boxes, bat boxes etc.	
Funding	Provide a budget line in the ETC budget for GI – related activities. Identify external sources of funding, such as from WBC, The Woodland Trust and local businesses (including support-in- kind, such as from local garden centres, and sponsored gardens) Signpost local residents and groups to sources of GI – related funding that they may be able to access.	
Community and wider engagement	Ensure / improve access to green space for all residents – including people with disabilities (eg. sensory gardens). Support the Earley Green Fair and pop-up events organised by ETC and local groups.	

Continue to support and explore opportunities for further GI -related	
the second se	
volunteering activities such as the Earley	
Environmental Group Wednesday	
Volunteers. Consider supporting	
voluntary projects producing information	
to encourage more walking and cycling.	
Help build local knowledge and skills	
around the opportunities and benefits of	
GI.	
Form partnerships, including with all local	
schools, youth groups, faith groups and	
ethnic minorities, to implement GI	
projects and share learning.	
Support existing and encourage new	
initiatives such as the Earley	
Environmental Group's nature walks and	
bug hunts, working collaboratively with	
input from ETC staff.	
Facilitate community involvement in the	
good design of GI schemes.	
good design of of schemes.	
Promote and support wildlife friendly	
gardening within private gardens and	
school grounds; bird and bat boxes, bug	
hotels, hedgehog runs etc. This may	
include joint working with the EEG.	
Promote initiatives such as Hedgehog	
Streets to residents by encouraging	
residents to work with neighbours on GI	
related initiatives, such as leaving gaps at	
the bottom of fences to enable wildlife	

	such as hedgehogs to move from plot-to-
	plot, and finding out what neighbours are
	growing in order help wildlife corridors
	that cut across fence lines.
	Once the Green Corridor Mapping is
	complete, communication will be
	necessary with residents whose gardens
	will fall within the se Corridors.
	Support opportunities for local food
	production, in people's gardens,
	community allotments, and community
	orchards.
	Robust, strategic lobbying
	of WBC to ensure, for instance,
	that Wokingham's Borough Design
	Guide and Local Plan Updates are
	complimentary to: GI thinking and
	approach;
	Earley Environmental
	Group proposals for a Lower
	Earley Nature Reserve;
	Plantlife Good Verge
	Guidelines
	Road verge guide 2021 WEB.pdf
	(plantlife.org.uk)
	The Green Corridor Map should become
	an intrinsic part of considerations related
	to Planning Applications by both ETC and
	WBC.
<u> </u>	

Celebrating and sharing success.	Competitions and awards for GI initiatives by school and groups working with young people and other residents.	
	Annual Earley in Bloom (from 2023)	
	Earley Home Grown Market	
	Annual Allotment Holder's Awards	
	Criteria to be determined for all of the above to enhance biodiversity.	

Adopted by Full Council: 11th May 2022
